Summary

Data engineer with 3+ years building production pipelines in Python and SQL, plus infrastructure work across Kubernetes, Terraform, Ansible, GitHub Actions CI/CD, and Prometheus-based monitoring. CCNA-certified, with volunteer experience automating monitoring for a 100+ device community wireless network. Targeting DevOps and infrastructure engineering roles.

Skills & Tools

Cloud & IaC: Terraform, Ansible, cloud-init, Azure (App Service, VNet, Key Vault, Entra ID, Azure SQL), Linode (LKE)
Containers & CI/CD: Docker, Kubernetes, Nginx, cert-manager, GitHub Actions, GHCR, Docker Hub, Git, Bitbucket
Monitoring & Networking: Prometheus, Grafana, VictoriaMetrics, Tailscale
Systems & Languages: Python (FastAPI, pytest), SQL, Linux, Proxmox VE, Windows Server, Databricks

Experience

EnQubes New Jersey, USA
Data Engineer June 2023 – Present
• Migrated the company's project planning tool from Excel to an Azure-hosted web app used daily by 100+ employees, with automated deployments through GitHub Actions
• Brought the app's Azure infrastructure (App Service, VNet, Key Vault, Entra ID) under Terraform by importing existing resources and routed database traffic over a private VNet service endpoint
• Re-architected an SAP ERP ingestion pipeline in Python and Databricks to load into staging tables before promotion to production, with an automated row-count validation gate that blocks bad loads across 5M+ rows per run

Philly Community Wireless Pennsylvania, USA
Network Infrastructure Volunteer June 2026 – Present
• Automated monitoring for the volunteer infrastructure team by writing Ansible playbooks that deploy VictoriaMetrics (Prometheus-compatible) and Grafana, giving them a single view of 100+ access points and routers
• Created a cloud-init template so new Linode servers start with monitoring already installed, keeping every server visible from first boot
• Installed wireless network equipment on-site, setting up routers and access points around underserved neighborhoods in Philadelphia

Projects

Kubernetes-Hosted Website Portfolio May 2026 – Present
• Set up a GitHub Actions CI/CD pipeline that packages my website as Docker images and deploys them to a Linode Kubernetes cluster with zero downtime
• Replaced the cluster's Prometheus stack with a lightweight Python exporter and cached FastAPI service that reads my Proxmox home lab over Tailscale, cutting node CPU usage from 100% to ~20%
• Built test-gated CI pipelines for custom exporter and API services with 27 tests covering API failures, malformed responses, and inconsistent metrics

Proxmox Server with Automation January 2026 – Present
• Designed and deployed a virtualized enterprise environment using Proxmox VE, hosting Windows Server 2022 and Linux virtual machines to simulate production infrastructure
• Wrote a custom Python Prometheus exporter for the server that collects Proxmox metrics in a single API call, responding with a ~5x faster median scrape than the community exporter
• Automated VM provisioning and access control with Ansible playbooks and cloud-init templates against the Proxmox API, replacing manual setup in the web UI

Education & Certifications

San Jose State University, B.S. Software Engineering · August 2019 – December 2022
Cisco Certified Network Associate - CCNA (April 2026) · **CompTIA Security+ (December 2025)** · **CompTIA Network+** (July 2025)
