

Sean Widjaja

Experience

Data Analyst

June 2023 – Present

Enqubes

- Developed internal automation tools using Microsoft Visual Basic, Python, and SQL that streamlined enterprise data management workflows, reducing effort for database updates
- Automated SAP data processing by generating Excel templates from production material records and creating bulk import tools to accelerate material deployment into production databases
- Managed database schema versioning and deployment pipelines using Alembic and Bitbucket, developing staging-table validation to verify material counts before promoting data to production

Network Infrastructure Volunteer

June 2026 – Present

Philly Community Wireless

- Aided in deploying wireless network equipment on-site, installing routers and access points in underserved neighborhoods
- Created a cloud-init template to automate provisioning of new Linode instances within the organization's VPC, bootstrapping each node with node-exporter for monitoring on first boot
- Built Ansible playbooks to deploy a centralized monitoring stack — Prometheus and Grafana on the monitoring server, node-exporter across managed Linodes

Projects

Proxmox Server with Automation

January 2026 – Present

- Designed and deployed a virtualized enterprise environment using Proxmox VE, hosting Windows Server 2022 and Linux virtual machines to simulate production infrastructure
- Configured Active Directory Domain Services, DNS, and DHCP to provide centralized identity management, name resolution, and network services across the lab environment
- Built a centralized monitoring platform using Docker, Prometheus, Grafana, and the Proxmox API to collect and visualize infrastructure health metrics

Kubernetes-Hosted Website Portfolio

May 2026 – Present

- Containerized and deployed a personal website to a Linode Kubernetes Engine (LKE) cluster, serving traffic through Nginx and managing deployments, services, and ingress within the cluster
- Established a container image pipeline by building Docker images and publishing them to GitHub Packages, with Kubernetes deployment manifests pulling versioned images directly from the registry
- Connected the cluster to my Proxmox lab over Tailscale, deploying the Kubernetes operator so workloads reach Prometheus over a private network which shows live infrastructure metrics on the site without exposing the endpoint publicly

Skills

Tools and Software

- Docker
- Kubernetes
- Linode
- Prometheus
- Grafana
- Ansible
- Github
- Proxmox
- Tailscale
- Active Directory
- Alembic

Languages

- Python
- SQL
- Microsoft Visual Basic
- Java

Certifications

- Cisco Certified Network Associate
- CompTIA Network+
- CompTIA Security+

Education

Bachelor of Science

Software Engineering

San Jose State University

August 2019 – December 2022
